SPECIFICATION AMENDMENTS

At page 12, line 3, delete "created by usinga custom" and insert --created by using a custom--.

At page 12, line 13, delete "theEvent ID" and insert --the Event ID--.

Replace the paragraphs beginning at page 20, line 7, through page 21, line 11, with:

-- FIG. 4 illustrates additional content aggregators that optionally may be used in accordance with the invention to create Event Ids. As shown, a Movies ~~Service Provider 404~~ Content Aggregator 402(2), a Music ~~Service Provider 406~~ Content Aggregator 402(4) and a News ~~Service Provider 408~~ Content Aggregator 402(3) also provide normalized output data streams to the Broadcast Server 114. That is, for each television program, movie, or other piece of content, the appropriate service provider creates an Event Identifier for each program, event, or piece of content and associates that Identifier with content related to that program, event, or piece of content. For example, each movie in a movie database provided by a Movies Data Provider 414(2) may receive an Event Id. Then, meta-data related to the movie is also assigned the same Event ID. Such data may include movie reviews, trailers, previews, interviews, etc. In News, events received from a News Data Provider 414(3) may be assigned Event Ids, such as an election scandal, an AIDS conference, a legislative debate, or the like. Then, meta-data associated with the event is also assigned the same Event ID, including web sites relating to the event, video clips, etc. For Music, a database of songs and artists maintained by a Music Data Provider 414(4) each may receive an Event ID, and the meta-data relating to songs and artists receive the same Event ID. Other ~~Service Providers 402~~ Content Aggregators 414 for different

categories can similarly create Event IDs that associate the programs, events, and contents related to their category with Event Identifiers.

While the Sports Content Aggregator 4̶0̶2̶ 402(1) operates as a data "push" model in which the various data feeds are aggregated and transmitted to the Broadcast Server, the service providers (including the Sports Content Aggregator 4̶0̶2̶ 402(1)) may optionally function in a "pull" model. For example, the Movies Content Aggregator 4̶0̶2̶ 402(2) contains a movies database, with enhanced content streams, and associated Event Identifiers. In this instance, the Broadcast Server 114, upon receipt of local listings information, polls the Movies S̶e̶r̶v̶i̶c̶e̶ Data Provider 4̶0̶2̶ 414(2) for enhanced data corresponding to the local listings. --

At page 26, line 14, change "denoted by the block 524" to read --denoted by the block 516--.

At page 26, line 19, change "one additional tuner 526" to read --one additional tuner 518--.
